

Strandply ERP — Design Guideline

2026-09-20 · @Someone

Purpose

This guideline is the single source of truth for the Strandply ERP interface. Every module — Dashboard, Production, Inventory, Sales & Dispatch, Purchase, Quality, Finance, Reports, Masters, Settings — is built from the rules below, not copied and re-styled from another module's HTML.

When building a new module: paste the CSS tokens block into the page's `<style>`, reuse the shared sidebar/topbar markup, and follow the [component](#) patterns rather than inventing new ones.

Color System

Backgrounds

Token	Hex	Use
White	#FFFFFF	Cards, tables, topbar, sidebar
Soft gray	#F8F9FA	Page background, input fill, table header row
Softer gray	#F5F6F8	Dashboard canvas, secondary panels

Text

Token	Hex	Use
Primary	#172033	Headings, body, table cell text
Secondary	#667085	Labels, nav links, secondary text
Muted	#98A2B3	Placeholders, timestamps, helper text

Borders

Token	Hex	Use
Border	#E6E8EC	Cards, tables, inputs, dividers
Border light	#EEF0F3	Hairline row separators

Strandply red — brand accent, never a background block

Token	Hex	Use
Red	#D71920	Active nav indicator, primary buttons, selected tabs, critical alerts, brand logo
Red light	#FFF1F2	Active nav background, badge fills
Red very light	#FFF7F7	Rare, extra-soft tints

Red stays under roughly 10% of any screen and never fills a sidebar, a full card, or a large background area.

Semantic

Meaning	Text	Background
Success — Completed / Approved	#16A34A	#F0FDF4
Warning — Pending / In Progress	#D97706	#FFFBEB
Info — Partially received / notice	#2563EB	#EFF6FF
Neutral — Draft / Inactive	#667085	#F5F6F8

Typography

Font: **Inter**, fallback system-ui, -apple-system, BlinkMacSystemFont, "Segoe UI", sans-serif.

Element	Size	Weight
Page heading	22-30px	700

Element	Size	Weight
Section heading	16–18px	600
Card title	14–16px	600
Body text	13–14px	400–500
Table cell	12–13px	400–500
Table header	11px, uppercase, letter-spacing .4px	600, color secondary
Small labels / meta	11–12px	500, color muted
KPI number	22–30px	700

Keep density compact — this is an ERP, not a marketing page. Don't oversize type; let whitespace and hierarchy carry the design.

Layout & Structure

Every module shares one shell: **Sidebar + Topbar + Content**.

Sidebar

State	Width	Behavior
Expanded (default)	232px	Full logo lockup, icon + label per nav item
Collapsed	72px	Icon mark only, icon-only nav items, label shows as a tooltip on hover

- A collapse toggle sits at the top of the sidebar next to the logo (chevron or panel icon)
- Toggling adds/removes `.sidebar--collapsed` on the sidebar and lets the content area reflow with `flex:1` — the freed width is real usable space, not blank margin
- Transition: `width 200ms ease` — smooth, never longer
- The user's choice persists per user (`localStorage`) so it doesn't reset on reload
- On the Dashboard in particular, collapsing the sidebar is how the KPI row, the WIP tracker and the chart cards get a wider canvas — see the implementation snippet below

Topbar — 60px, white, 1px bottom border. Left: breadcrumb / page title. Center: global search ("Search anything..."). Right: notification bell, divider, avatar + name + role + chevron.

Content

Token	Value
Page padding	24px
Card border radius	12px
Card border	1px #E6E8EC
Card padding	16–22px
Grid / row gap	14–16px
Table row divider	1px #EEF0F3
Status pill radius	20px (fully rounded)

No gradients, no glassmorphism, no shadows beyond a very subtle one — flat cards with a hairline border read as "serious ERP", not "consumer app".

Components

Buttons

Type	Style
Primary	White text on #D71920 , 8px radius, 10–13px vertical padding, 18px horizontal
Secondary	White background, #E6E8EC border, #172033 text
Danger	Red used only where an action is genuinely destructive — never every button

Inputs — #F8F9FA fill, 1px #E6E8EC border, 8px radius, 11px vertical / 14px horizontal padding, 14px Inter text, 12.5px 600-weight label above.

Tabs — underline style: active tab is #D71920 text with a 2px red bottom border; inactive tabs are #667085 with no border.

Tables — header row #F8F9FA background, 11px uppercase secondary text; body rows white, 13px text, 1px #EEF0F3 top border between rows; row hover #F8F9FA ; no vertical cell borders.

KPI cards — white, 1px border, 12px radius, 16–18px padding; icon in a small tinted circle top-left (red-light only for the one KPI that deserves emphasis, neutral gray for the rest); label small/muted above a bold 22–30px number; optional trend badge (green up / red down) top-right.

Status pills — fully rounded, 11px 600-weight text, 3px/10–10px padding: Completed → green, In Progress / Pending → amber, Partially Received / info → blue, Draft / Inactive → neutral gray, Critical / Rejected → red.

Breadcrumb — Module / Page , secondary text with the current page in primary/600-weight, separated by a small chevron.

Pagination — 30×30px squares, 7px radius, active page filled #FFF1F2 with red text/border, others neutral with a 1px border.

Alerts — a plain icon + two-line text (message, then source module · timestamp in muted text); no colored card background — only the icon carries color, and only genuinely critical alerts use red.

Icons

- One consistent outline family across the whole app — thin stroke (stroke-width: 1.8), rounded caps/joins, fill: none , stroke: currentColor so an icon inherits its parent's text color
- Sidebar nav icons: 17×17px. Topbar icons: 19px. KPI icons: 16px inside a 34px tinted circle.
- No emoji, no cartoon or filled icon styles, no mixing icon libraries — pick one outline set (Lucide or an equivalent thin-line set) and use it everywhere
- Icon color follows context: #667085 (secondary) by default, #D71920 only on an active/selected state or a critical alert, semantic colors (green/amber/blue) only inside their matching status pill or KPI

Logo Usage

Two assets from the official Strandply artwork, both trimmed and transparent:

Asset	Use
Full lockup (mark + STRANDPLY™ wordmark + tagline)	Sidebar header (expanded), login screen, print headers
Icon mark only (the layered chevron symbol)	Sidebar header (collapsed), favicon, avatar-style brand mark

- Never redraw, recolor, or substitute the mark (no generic leaf/tree icon) — always the real logo file
- Minimum width: 120px for the full lockup, 24px for the icon mark, below which it becomes illegible
- Keep clear space around the mark roughly equal to the height of the "S" in STRANDPLY on every side
- Don't stretch, skew, or place it on a busy or low-contrast background — white or #F5F6F8 only

CSS Tokens

Paste this into the `<style>` of every module HTML page so all modules draw from the same values:

```
:root{
  /* Backgrounds */
  --bg-white:#FFFFFF;
  --bg-soft:#F8F9FA;
  --bg-softer:#F5F6F8;

  /* Text */
  --text-primary:#172033;
  --text-secondary:#667085;
  --text-muted:#98A2B3;

  /* Borders */
  --border:#E6E8EC;
  --border-light:#EEF0F3;
```

```
/* Brand red */
--red:#D71920;
--red-light:#FFF1F2;
--red-verylight:#FFF7F7;

/* Semantic */
--success:#16A34A;    --success-bg:#F0FDF4;
--warning:#D97706;    --warning-bg:#FFFBEB;
--info:#2563EB;       --info-bg:#EFF6FF;

/* Type */
--font:'Inter',system-ui,-apple-system,BlinkMacSystemFont,'Segoe UI',sans-serif;

/* Layout */
--sidebar-w:232px;
--sidebar-w-collapsed:72px;
--topbar-h:60px;
--radius-card:12px;
--radius-pill:20px;
--radius-input:8px;
--gap:16px;
}
```

Collapsible Sidebar

Reuse this exact structure in every module so the collapse behaves identically everywhere.

```

<div class="app-shell">
  <aside class="sidebar" id="sidebar">
    <div class="sidebar-head">
      
      
      <button class="sidebar-toggle" id="sidebarToggle" aria-label="Collapse
sidebar">
        <svg width="16" height="16" viewBox="0 0 24 24" fill="none"
stroke="currentColor" stroke-width="1.8" stroke-linecap="round" stroke-
linejoin="round"><path d="M15 41-8 8 8 8"/></svg>
      </button>
    </div>
    <nav class="sidebar-nav">
      <a class="navlink active" href="#"><svg class="navicon">...</svg><span
class="navlabel">Dashboard</span></a>
      <!-- repeat per module -->
    </nav>
  </aside>
  <main class="content" id="content">
    <!-- topbar + page content -->
  </main>
</div>

```

```

.app-shell{display:flex;height:100vh;}
.sidebar{width:var(--sidebar-w);flex-shrink:0;background:var(--bg-
white);border-right:1px solid var(--border);
  transition:width .2s ease;overflow:hidden;white-space:nowrap;}
.sidebar.collapsed{width:var(--sidebar-w-collapsed);}
.sidebar .logo-icon{display:none;}
.sidebar.collapsed .logo-full,
.sidebar.collapsed .navlabel{display:none;}
.sidebar.collapsed .logo-icon{display:block;}
.sidebar.collapsed .navlink{justify-content:center;}
.content{flex:1;min-width:0;display:flex;flex-direction:column;}

```

```
const sidebar = document.getElementById('sidebar');
const toggle = document.getElementById('sidebarToggle');
const KEY = 'strandply-sidebar-collapsed';

if (localStorage.getItem(KEY) === '1') sidebar.classList.add('collapsed');

toggle.addEventListener('click', () => {
  const collapsed = sidebar.classList.toggle('collapsed');
  localStorage.setItem(KEY, collapsed ? '1' : '0');
});
```

Because `.content` is `flex:1`, collapsing the sidebar hands its freed 160px straight to the page — on the Dashboard that's the extra room the KPI row, WIP tracker and chart cards use to lay out wider, not blank space. The preference is per-browser via `localStorage`, so it holds across every module without a server round-trip.

Responsive Breakpoints

Range	Behavior
Desktop ≥1440px	Primary target — full sidebar, full layout
Laptop ~1280px	Sidebar defaults to collapsed (icon-only); user can still expand it
Tablet ≤1024px	Sidebar becomes an overlay drawer opened from a topbar hamburger; KPI grid → 2 columns
Mobile ≤768px	KPI cards stack to 1 column; tables scroll horizontally inside a wrapper; the Production WIP tracker scrolls horizontally
